an examination of metaphor in poetry as a microcosm of the human imagination a way to understand the mechanisms of
 creativity in the spider s thread keith holyoak looks at metaphor as a microcosm of the creative imagination holyoak a
 psychologist and poet draws on the perspectives of thinkers from the humanities poets philosophers and critics and from the
 sciences psychologists neuroscientists linguists and computer scientists he begins each chapter with a poem by poets including
 samuel taylor coleridge sylvia plath walt whitman emily dickinson robert frost theodore roethke du fu william butler yeats and
 pablo neruda and then widens the discussion to broader notions of metaphor and mind holyoak uses whitman s poem a
 noiseless patient spider to illustrate the process of interpreting a poem and explains the relevance of two psychological
 mechanisms analogy and conceptual combination to metaphor he outlines ideas first sketched by coleridge who called poetry the
 best words in their best order and links them to modern research on the interplay between cognition and emotion controlled and
 associative thinking memory and creativity building on emily dickinson s declaration the brain is wider than the sky holyoak
 suggests that the control and default networks in the brain may combine to support creativity he also considers among other
 things the interplay of sound and meaning in poetry symbolism in the work of yeats jung and others indirect communication in
 poems the mixture of active and passive processes in creativity and whether artificial intelligence could ever achieve poetic
 authenticity guided by holyoak we can begin to trace the outlines of creativity through the mechanisms of metaphor

a user friendly guide to identifying and understanding the spiders of the pacific coast there are 67 families of spiders found in north america and 59 of them can be found in california this field guide will cover all 59 of those families including introduced species and common garden spiders those will be given extra coverage each family is reviewed including details of their identification taxonomy distribution and natural history there will be a full color plate for each of the families

the spider genus *selenops* occurs in both the old world and new world subtropics and tropics and contains nearly half of the species in the family *selenopidae* these spiders are extremely flattened dorsoventrally and are amongst the fastest animals in the world despite the large size of some species these aforementioned characteristics can make them difficult to detect in this monograph the species from north america central america and caribbean islands excluding cuban endemics are revised in total 21 new species are described and 6 species are synonymized the males of *s. bani* and *s. marcanoi* and the females of *s. phaselus* and *s. geraldinae* are described for the first time almost all species are redescribed with new illustrations including the internal female copulatory organs most of which are illustrated for the first time new distributional records and a key to species are also provided

spiders are wonderful creatures their varied and complex range of behavior and highly developed sensory systems are excellently adapted to the environmental conditions as is proven by their evolutionary success over 400 million years spiders have developed their sensory organs to a fascinating technical perfection and complexity in his intriguing book professor friedrich g barth puts this technical perfection into the context of biology in which the interaction between environment and sensory organs and the selectivity of the senses as a link between environment and behavior play a major role
